

Installing hbase

1. Download hbase from <https://hbase.apache.org/downloads.html>
2. Set java home in hbase-env.sh
3. Set ssh port in hbase-env.sh
4. Update hbase-site.xml

```
<configuration>
  <property>
    <name>hbase.rootdir</name>
    <value>hdfs://master-id:9000/hbase</value>
  </property>

  <property>
    <name>hbase.zookeeper.property.dataDir</name>
    <value>/home/user/hadoop/zookeeper</value>
  </property>

  <property>
    <name>hbase.cluster.distributed</name>
    <value>true</value>
  </property>
  <property>
    <name>hbase.zookeeper.property.clientport</name>
    <value>2185</value>
  </property>
  <property>
    <name>hbase.unsafe.stream.capability.enforce</name>
    <value>false</value>
  </property>
  <property>
    <name>hbase.zookeeper.quorum</name>
    <value>master-ip,worker-id</value>
  </property>
</configuration>
```

5. Start hbase using `~/hbase/bin/start-hbase.sh`
